

Tukka Meter

How to Install the App

A quick guide to installing Tukka Meter (SSC · Railway · Bank Mock Tracker) as an app on your desktop or phone, straight from your browser — no Play Store needed.

akarsh-kc.github.io/tukka-meter--ssc-bank-railway-

Install in 4 Simple Steps

Works on Chrome or Edge, on both desktop and Android. Follow the steps below — each one matches a screenshot on the following pages.

1

Open the site

Go to akarsh-kc.github.io/tukka-meter--ssc-bank-railway- in Chrome or Edge.

2

Tap Install

Click the Install icon/button next to the address bar.

3

Confirm

A popup shows the Tukka Meter name and icon — click Install to confirm.

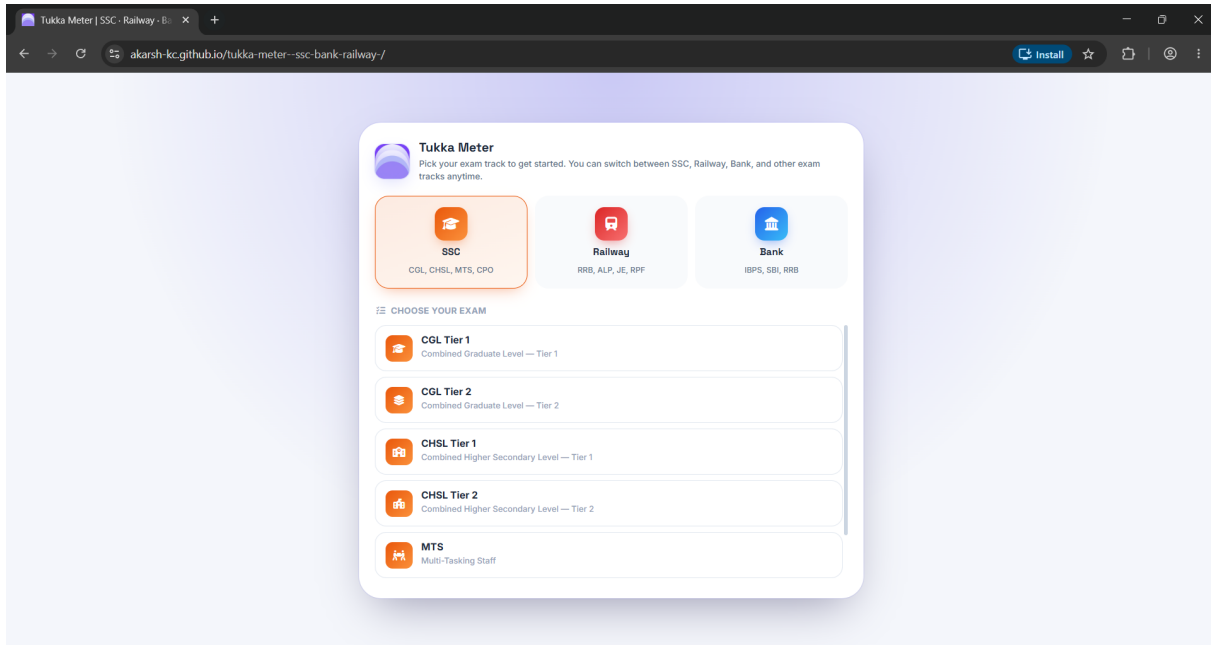

4

Pin & launch

Optionally pin to your taskbar, then open Tukka Meter like any other app.

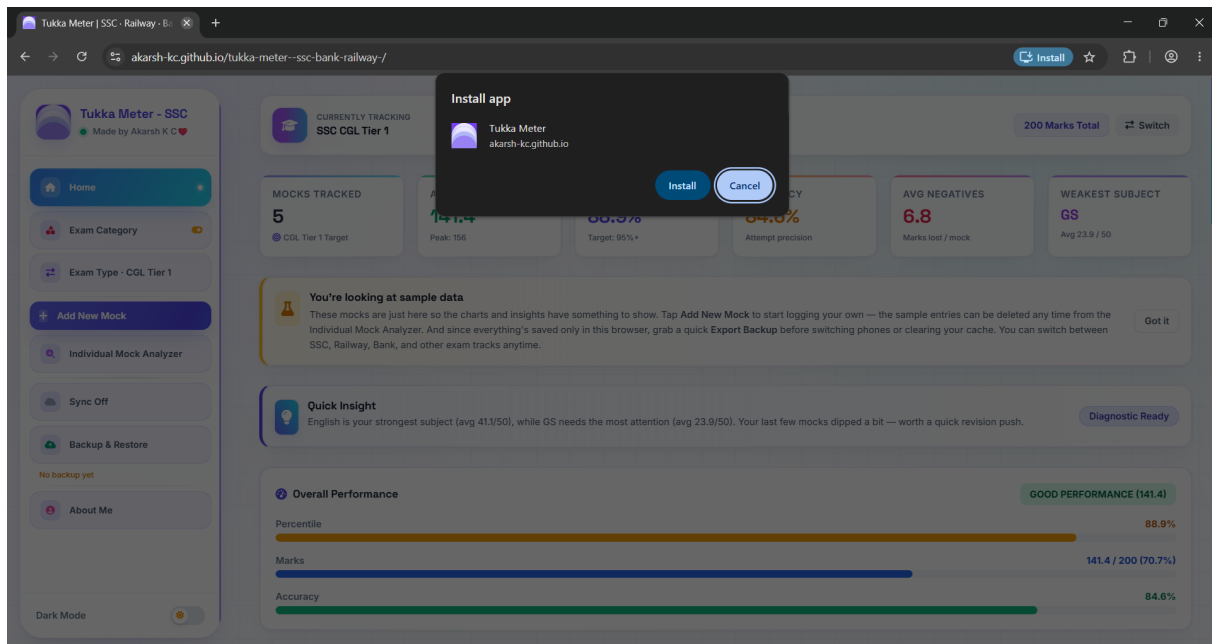

Step 1 – 2: Open the site & find Install

Visit the Tukka Meter site. In the top-right of the address bar, you'll see an “Install” button or icon — click it.

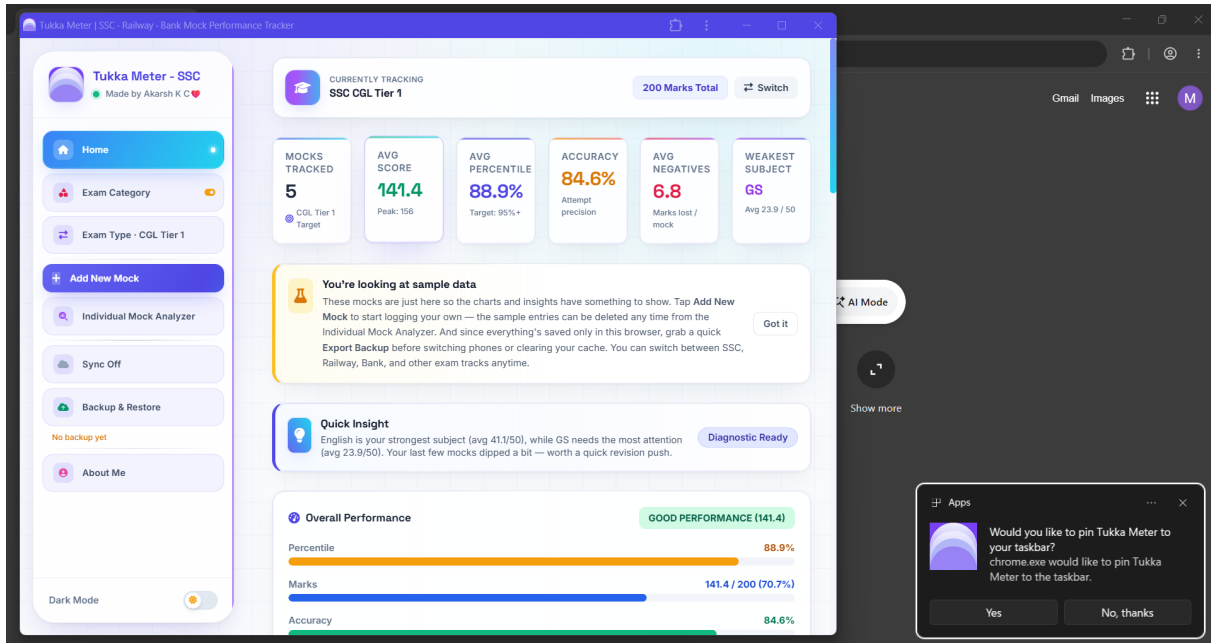

Step 3: Confirm the install

A small “Install app” popup appears showing the Tukka Meter name and icon. Click the blue Install button to confirm.

Step 4: Pin to taskbar (optional) & launch

Your browser may ask if you'd like to pin Tukka Meter to your taskbar for quick access. Either way, the app is now installed and opens in its own window, without the browser bar.

A Few Extra Notes

On Mobile (Chrome for Android)

The install flow is the same, but the button may say “Add to Home screen” instead of “Install.” It works the same way.

On iPhone (Safari)

There's no automatic install prompt. Tap the Share icon, then choose “Add to Home Screen” manually.

Samsung Internet Browser

For the best visual experience, switch Samsung Internet to Light theme: Menu → Settings → Appearance/Menu style → Light. Samsung's dark mode can override the app's own styling and make some text hard to read.

Prefer the APK instead?

You can also download the Tukka Meter APK directly from the GitHub Releases page and install it manually on Android.

■■ Since Tukka Meter isn't on the Play Store, Android/Play Protect may show an “Unknown app” or “App not verified” warning when installing the APK. This is expected — tap Install anyway.
